

More ASK Nail Products:

TIPS for Toes:

This specially formulated conditioner for toe nails transforms yellowed, cracked, dry or peeling nails into strong healthy looking nails.

ASK Contour File:

Our unique file is designed to gently file and seal your nail edge. This helps protect it from peeling, splitting and other damage.

ASK REVIVAL Hand & Nail Cleanser:

An extremely mild formulation that cleans while helping to preserve the skin's natural moisture barrier.

ASK Nail Cleaning Brush:

This little brush is designed to effectively clean the underside of your nails without damaging the side edges.

ASK REVIVAL Nail Polish Remover:

Our exclusive formula will condition and deep treat your nails with lipids as it removes nail polish in a clean sweep. Your nails will be conditioned instead of being dried or stripped of lipids by the solvents found in other nail polish removers.

ASK REVIVAL Skin Milk:

A rich moisturizing milk formulated without waxes or silicones. Skin Milk will give you soft and supple skin while enhancing the penetration and boosting the effectiveness of TIPS. This formula can also be used on the nails and cuticles.

When is the best time to apply TIPS?

TIPS is absorbed directly into your nail and surrounding area, it is best if your nails have not been in water for at least 1 hour prior to application. We recommend you apply it first thing in the morning before you shower or bath to allow full absorption. This also prevents water from being absorbed and weakening your nails. You can apply TIPS more often if your hands are frequently in water. TIPS will help protect your nails from water damage if you apply it before doing dishes, washing the baby, or any other time your hands are immersed in water.

How do I grow out artificial nails?

TIPS can be used to grow out artificial nails without the damage and unsightly look of removing the artificial nails first. Simply apply TIPS to your cuticles and the underside of your natural nail every day. As your own nail grows you can shorten the artificial nail until your natural nail has grown in completely.

Will TIPS wash off?

TIPS is revolutionary because it penetrates into your nail almost immediately. TIPS won't wash off your nail because it isn't on your nail it is in your nail.

Can I wear polish while using TIPS?

Yes, you can wear polish – with caution. The truth is, polishes and nail hardening products dry on top of the nail, robbing the nail of its essential lipids that protect your nails from breakage and damage. We recommend you apply TIPS to your cuticle and the underside of each nail while wearing polish to keep the strong new growth developing and to replenish the lipids lost to the nail polish.

TIPS Conditioning Nail Polish Remover will condition and deep treat your nails with lipids to compensate for the effects of the polish.

Should I push back my cuticles?

Your cuticle is a natural seal between the hard nail and the soft skin. Your cuticle also produces the final, most protective layer of your nail so if it is irritated or damaged in any manner, it leaves your nail unprotected. When your cuticles are left alone, and treated daily with TIPS, they will naturally begin to recede within a few weeks. Please never cut, trim, massage, or push back your cuticles.

My nails are awful, help!

The fastest way to achieve long, strong, naturally beautiful nails is to start with nails that are damage-free.

Nails are dead tissue. They cannot repair themselves and damage will always "run" farther down into the nail. The longer your nail is, the faster the damage runs. It is better to start with healthy tissue. Attempting to preserve any of a damaged nail's length will delay results and can lead to further damage and breakage. Remove any noticeable damage by filing and smoothing your nail edges frequently.

Start by shortening your nails, using clippers or nail scissors to remove all visible damage and then file all exposed nail edges smooth. Do not file or buff the top of your nails.

When damage is running into the pink "quick" area of your nail bed where it can't be cut, keep that nail as short as possible and maintain regular filing until all the damage has grown out.

When there is no damage left, allow your nails to grow in length. Be patient and things will improve. It took time to get where you are, and it will take time to get your nails looking healthy and natural again. Initially, look for changes and results in and near your cuticle, where new nail is growing. You will see an improvement in the colour and condition of your nails and cuticles within weeks.

Apply T.I.P.S. solution once* a day:

1. To the top of your nail
2. To your cuticle
3. To the underside of your nail
4. Rub any excess into your hands, but do not massage into cuticles

TIPS will penetrate into the nail and your skin almost instantly.

* use TIPS 2 - 3 times a day if your hands are frequently in water.

T.I.P.S. Tips to Know:

- TIPS absorbs best into clean, dry nails that have not been in water for at least 1 hour.
- Cuticles are best left alone. Do not push back, cut or massage them.
- Wear gloves when using cleansers or chemicals.
- Apply TIPS before other creams or lotions, keeping creams and lotions away from nails and cuticles.
- Use clippers or scissors to shorten your nails rather than using a file which should be used for final sealing of the nail edge.
- Keep your nails shaped straight across the tip to maintain their strength and to resist breakage. To maintain the strongest area of your nail, do not file the side edges.
- Check nails frequently throughout the day, smooth any nicks or damage along the edge of your nail immediately, with the ASK Contour File.
- Never smooth or buff the top of your nails.
- To prevent damage, use a brush to clean under your nails rather than a hard file.
- Shake your TIPS solution if any settling of ingredients occurs.
- Store TIPS in a cool, dry location.
